METAL VENEER MOULDINGS

The Era Collection consists of 5 profiles with oxidized metal veneer applied on pine, creating the look of industrial chic borrowed from eras past.

Using a metal veneer rather than metal leaf not only elevates the richness of the look, it also creates a surface which is enhanced by time accepting natural wear imposed by handling, age, and the elements. The distressed metal finish along with the roughness of the pine, forges an overall look that is right in line with today's retro-modern trends in interior design, employing rich neutral metal finishes in combination with reclaimed wood.

The Era Collection works well with many types of art, providing framing solutions for photography, works on canvas, watercolors, lithographs, etchings, and more.

◀ **Rough Hewn:**
Employing the look of reclaimed wood is enhanced further by incorporating contrasting wood grains and visible finger-joints.
